

How to add a Report Link

When a task's report/record is filed, attach a link to it on the dashboard. That way QA and the Director can open and verify the report in one click. It takes about 30 seconds.

1 Put the report file online (skip if it already is)

Save the report PDF / Word file / scan to **Google Drive** (or your usual shared folder). If the report is already an email attachment or a file in Drive, use that.

Paper-only record with a wet signature? See the note at the bottom.

2 Copy a shareable link

In Google Drive: **right-click the file → Share**. Under **General access** choose **"Anyone with the link"** and role **Viewer**, then click **Copy link**.

"Anyone with the link" means anyone who has the (unguessable) link can view it — it is not listed publicly. Viewer = they can read, not edit.

3 Open the task on the dashboard

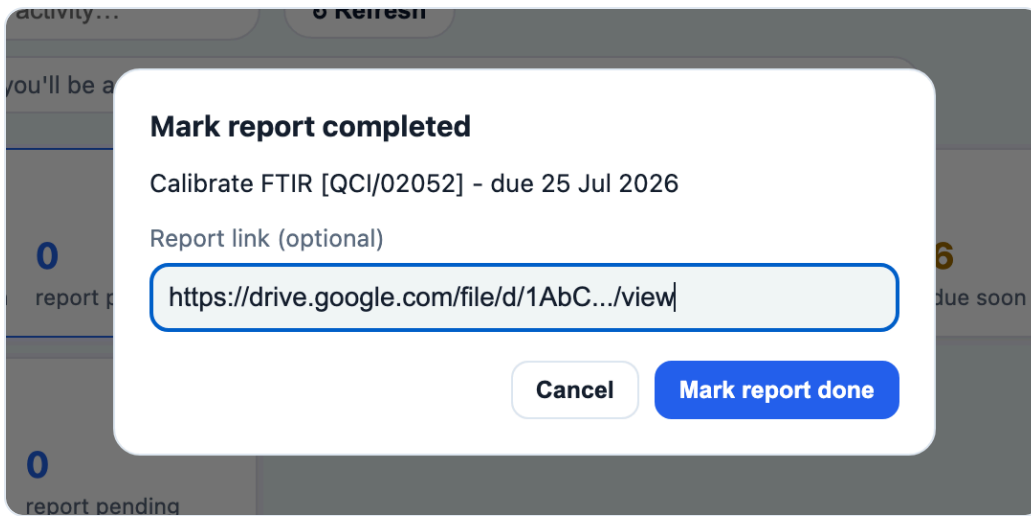

Go to the dashboard, pick your department, and find the task (use the **Search box** — type the equipment ID or name). Tap **✓ Report done**.

4 Sign in if asked

Enter your **department password** and **your name**. You stay signed in for 1 hour, so you can do several at once.

5 Paste the link and save

Paste the copied link into the **Report link** box, then tap **Mark report done**.

6 Done — the report is now attached

The task shows a green  **View report** button. Anyone can click it to open the actual report. Reminder emails for that task stop.

No electronic file (paper record only)? You can still tap "Report done" without a link — the task will show "**no report link**", and QA will verify against the physical file. The link is optional; it is just the easiest way for others to see the report without asking.
